

Linea

The Linea frame (plate) was created by the grand abilities of the Roll Line© designers, and presents a revolutionary system with 6 adjustable positions in order to simulate the same rocking of the edge offered by an ice-skating blade, and created to offer the greatest performance for all in-line skaters. Created from a solid block of aerospace-derived aluminum, the frame guarantees strong resistance to impacts, and to the tensions and torsions associated with in-line skating. The unique inclination of the toestop offers the best angle for the execution of jumps and spins. The Linea frame is mountable on both roller-and ice-skating boots. For ease and compatibility, the frame is the only one with sizing in inches. Ambra toestops, ABEC 7 bearings, spacers, posterior protection kit, power wedges, and tool kit included.
